# Archon

<ἀρχων>

- A shredder system built in this machine, is different from a conventional type, does not leave any printed words after putting documents into a shredder, enabling further high-level maintaining confidentiality.
- An object processed with this machine, is highly defiberized while printing ink is deconcentrated, and then easily processed at a recycle plant.
- This machine with high technology cultivated through paper manufacturing, enables compatibility between high securities and recycle.

Enforcement of Privacy protection legislation has undergone a dramatic change in handing data that are frequently run into companies on a daily basis.

Leaks of corporate data are viewed as serious problem in society's eyes. Recently, the word of, " in an unthinking moment " [つい、うっかり] used to leaked data, is considered beyond all reason, to be nonsensical excuse.

TAIZEN Dissolving Machine Archon is a machine with high performance to develop for waste material treatment, having a capable of deleting and dissolving for documents by itself, no needing another machine.

Now, Archon is used as a very important machine for waste paper regenerating treatment at many paper mills, and extended to facilities at a security recycle laboratory where confidential documents are stored and shredded, and further to companies such as an depository and waste disposer authorized by Certification of "Privacy Mark" when personal information are properly handled.

Outlet

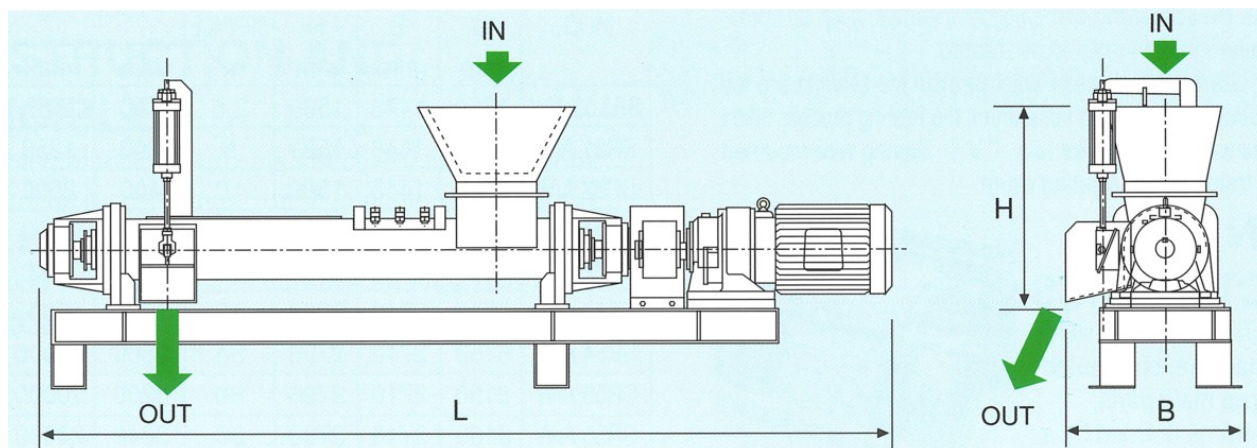

※ A grinder may be used as pre-processed machine, when the inserting object is larger then usual one.

## HIGH SECURITIES RECYCLE

## FEATURES

- Deletes confidential document perfectly thorough high density dissolving process.
- Allows compact size to have a small installation place.
- Provides easy maintenance and operation control.
- Selectable according to the process amount.
- Given at lower plant cost.
- No reeking.
- Promotes defibering when regenerating waste paper including combined medical agents such as hot-melt, resin, latex, and adhesive is regenerated.
- Enables to regenerate good quality paper material by keeping fiber destruction or shape change to minimum.

## SPECIFICATION

MODEL	AR20	AR25	AR35
DIMENSION(mm)	L 3300	L 3600	L 4300
	B 500	B 800	B 950
	H 900	H 900	H 1150
Process Amount(kg / hr)	100	200~400	500~1000
Power(kw)	5.5~11	15~30	37~75
WEIGHT(kg)	700	1500	2500

Design and Power subject to change due to company practice.  
Contact us about another specifications if you need.
